

SANDY SPRINGS

Transportation Master Plan

Plan Basics

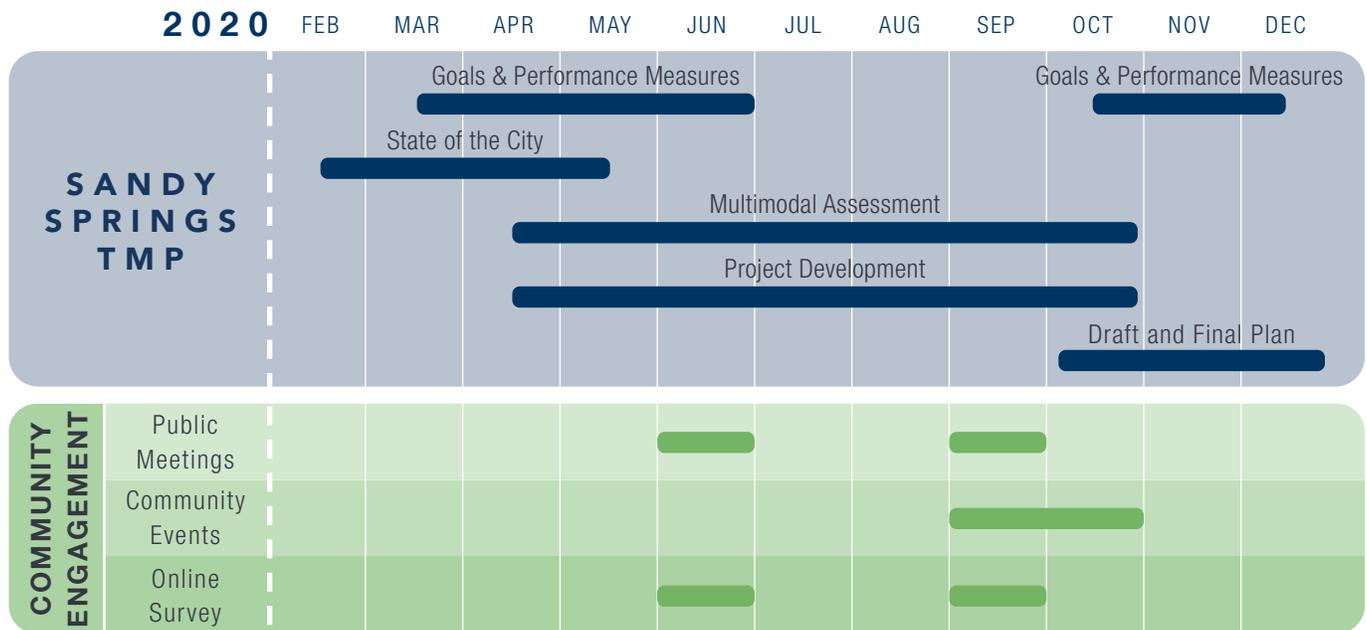

The Sandy Springs Transportation Master Plan (TMP) will identify and recommend forward-thinking transportation projects and policies that improve mobility, safety, and transportation equity for all users. The plan will focus on innovative multi-modal transport solutions that maximize use of existing infrastructure and expand mobility options for residents and visitors.

Why The Plan Matters

The original plan was developed in 2008 and much has changed in Sandy Springs! The TMP will establish a vision of transportation priorities in Sandy Springs over the coming decades. Projects recommended in this plan will become candidate projects for potential upcoming funding opportunities.
